

# SAVE ENERGY SAVE COSTS

## Reducing the depth of your pool can do both

If your pool is over 1.8 metres in depth, you might be heating and managing water that you and your pool users don't need. Now there is a quick and easy remedy - with no risk of structural damage and payback within 3 - 5 years.

By using a specially formulated, tried-and-tested lightweight concrete, the pool can be filled to a new level without risk of damage from excess weight and with the possibility of a reduction in water charges, maintenance and poolside staff.

\* On a pool 25m x 10m, having a deep end of 3 metres and shallow end of 1 metre

Typical  
saving of  
**£6000 plus,  
per annum\***
